

5A-75EReceiving Card

Specification v8.2.2

Overview

5A-75E receiving card is a specially introduced high cost-effect product of Colorlight, which is designed for customers to save cost, reduce points of fault and failure rate. 5A-75E single card can load up to 256×1024 pixels, support up to 32 groups of parallel data or 32 groups of serial data. Based on the technical advantages of conventional receiving cards, 5A-75E can be integrate into the HUB75 interfaces, which is more reliable and more economical on the premise of ensuring high-quality display.

Features

Display effect

- 8bit video source input.
- Color temperature adjustment.
- 240Hz frame rate.
- Better gray at low brightness.

Correction processing

• Pixel-to-pixel calibration in brightness and chromaticity.

Easy maintenance

- Highlight and OSD.
- Screen rotation.
- Data group offset.
- Any pump row and any pump column and any pump point.
- Quick firmware upgrade and quick release of correction coefficients.

Stable and reliable

- Loop redundancy.
- Ethernet cable status monitoring.
- Firmware program redundancy and readback.
- 7×24h uninterrupted work.

Feature details

Display effec	t				
8bit	8bit color depth video source input and output, monochrome grayscale is 256, can be matched with 16777216 kinds of mixed colors				
Frame rate	Adaptive frame rate technology, not only supports 23.98/24/29.97/30/50/59.94/60Hz regular and non-integer frame rates, but also outputs and displays 120/240Hz high frame rate pictures, which greatly improves picture fluency and reduces drag film. (* it will affect the load).				
Color temperature adjustment	Adjustment of color temperature, that is, saturation adjustment, to enhance the expressiveness of the picture.				
Better gray at low brightness	By optimizing the gamma meter algorithm, the display screen can maintain the integrity and perfect display of gray scale when reducing the brightness, showing the display effect of low brightness and high gray scale.				
Calibration	8bit precision brightness and chromaticity correction point by point, which can effectively eliminate the chromatic aberration of the lamp point, ensure the uniformity and consistency of the color brightness of the entire screen, and improve the overall display effect.				
Shortcut ope	eration				
Cabinet highlight	Using the control software, you can quickly mark the selected target cabinet, display a flashing box on the front of the cabinet, and change the flashing frequency of the cabinet indicator at the same time, which is convenient for front and rear maintenance.				
Quick OSD	Using the control software, you can quickly mark the actual hardware connection serial number of the receiving card corresponding to the Ethernet port, which is convenient for setting the connection relationship of the screen.				
Image rotation	Single cabinet image to be rotated at 90°/180°/270° angles, and with part of the main control, the single cabinet image can be rotated and displayed at any angle.				
Data group offset	Screen offset in units of data groups, suitable for simple special-shaped screens				
Hardware mo	onitoring				
Bit error detection	It supports the detection of data transmission quality and error code between receiving cards, and can easily and quickly identify the cabinet with abnormal hardware connection, which is convenient for maintenance.				
Redundancy					
Loop redundancy	The redundant Ethernet port is used to increase the connection with the transmitting equipment and increase the reliability of cascading between equipment. When one circuit fails, it can realize seamless switching to the other circuit and ensure the normal display of the screen.				

Version: V8.2.2

Firmware redundancy	It supports firmware program backup and can be upgraded safely. There is no
	need to worry about the loss of firmware program due to cable disconnection
	or power interruption during the upgrade process.

Basic parameters

Control System Para	meters					
Control Area	Normal chips: 128×1024pixels, PWM chips: 256×1024pixels, Shixin					
Control Area	chips: 162×1024 pixels.					
Ethernet Port Exchange	Supported, arbitrary use.					
Display Module Com	patibility					
Chip Support	Normal chips, PWM chips, Shixin chips.					
Scan Type	Up to 1/128 scan.					
Module Specifications Supported	Module of any row and column within 13312pixels.					
Cable Direction	Route from left to right, from right to left, from top to bottom, from bottom to top.					
Data Group	32 groups of parallel RGB full color data and 32 groups of serial RGB data, which can be expanded to 128 groups of serial data, data groups can be exchanged freely.					
Data Folded	 Normal chips: 2~8 fold horizontally, 2~4 fold vertically. PWM and Shixin chips: horizontal or vertical 2~8 fold. 					
Module pumping point, row and column	Any pumping point and any pumping row and any pumping column.					
Monitoring Function						
Bit Error Monitoring	Monitor the total number of data packets and error packets to check network quality.					
Pixel-to-Pixel Calibra	ation					
Brightness Calibration	8bit					
Chromaticity Calibration	8bit					
Other features						
Redundancy	Loop redundancy and firmware redundancy.					
Optional functions	Shaped screen.					

Hardware

Appearance

Interface

S/N	Name	Function			
1	Power 1	Connect to DC 3.8V~5.5V power supply for the receiving card,			
2	Power 2	only use one of them.			
3	Network port A	RJ45,for transmitting data signals, dual network ports can			
4	Network port B	enter and exit at will, and the system will automatically identify.			
		The attached test procedures can achieve four kinds of			
5	Test button	monochrome display (red, green, blue and white), as well as			
	(170	horizontal, vertical and other display scan modes.			
	Power indicator light D1	dicator light D1 Red indicator light shows that the power supply is normal			
	Signal indicator D2	Flashes once per	Receiving card: normal working,		
		second	Ethernet cable connection: normal.		
6		Flashes 10 times	Receiving card: normal working, Cabinet:		
		per second	Highlight.		
		Flashes 4 times	Receiving card: back up sender cards (Loop		
		per second	redundancy status).		
7	External interface	For indicator light and test button.			
8	UIID ninc	HUB75 interface J1~J16 are connected to the display modules.			
ð	HUB pins	For details, see the interface definition.

Equipment Specifications

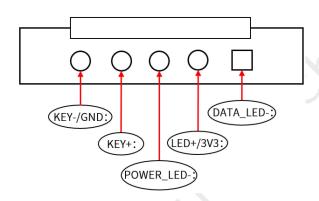

Physical Specification	S					
Hardware interface	HUB75 interfaces					
Ethernet port	1Gb/s					
transmission rate	100/5					
Communication Distance	Recommended: CAT5e cable≤100m					
Compatible with Transmission Equipment	Gigabit switch, Gigabit fiber converter, Gigabit fiber switch					
Size	L×W×H / 145.2mm(5.72")×91.7mm(3.61")×18.4mm(0.72")					
Weight	100g / 0.22lbs					
Electrical specification						
Voltage	DC 3.8~5.5V, 0.6A					
Rated power	3.0W					
Body Static Resistance	2KV					
Operating environmer	nt					
Temperature	-25°C~75°C (-13°F~167°F)					
Humidity	0%RH-80%RH, no condensation					
Storage and transport	environment					
Temperature	-40°C~125°C (-40°F~257°F)					
Humidity	0%RH-90%RH, no condensation					
Package information						
Packaging rules	Standard blister card tray device, 100 cards per carton					
Package size	W×H×D / 603.0mm(23.74")×190.0mm(7.48")×501.0mm(19.72")					
Certification Informati	on					
RoHS
